HOSE GUIDE

The Hose Guide is used to assist the hose used for the underground system. The Hose Guide is attached to the end of the hose. The Hose Guide assists the hose during its return into the main underground duct.

The Hose Guide is constructed of multiple 1/4” solid steel fingers. The fingers are welded to a 2” stainless steel band. The stainless steel band is then attached to either a metal hose or a “no crush” hose.

<u>Model</u>	<u>Hose Diameter</u>	
2980-80	3”	Metal or No Crush
6311-80	4”	Metal or No Crush
23660-54	5”	Metal or No Crush
23660-90	6”	Metal or No Crush
