The Monoxivent Series 800 cartridge collector is a complete central type filtration system. The series 800 has been designed as a highly versatile type collector. The small collector is offered in three CFM options and two filtration combinations.

The collector is supplied with two or three cartridge filters. An open chamber is located above the cartridge filters. The chamber has been designed to add several types of after filters, depending upon the application. The chamber is ready to slide in filter cells of either a HEPA or a carbon nature. The collector is shipped standard, without after filters, however the customer may add these at a later date.

Applications: Welding, Cutting, Grinding, Machining, Laser Machines, Plasma Cutting.

* The Series 800 Collector is standard with air pulse cleaning for filters.

* Clean dry compressor air, furnished by others.
