The MONOXIRAIL System features an exhausting rail that allows for flexibility in workspace environments. The rail system allows multiple bays to utilize hose drops, while providing source capture of toxic fumes. The rail features a heavy-duty trolley, air tight rubber lips, and durable hanging brackets. The hose drops are offered in two forms: the 11000 drop or the RTS drop. The 11000 utilizes a cable balancer to support and guide the assembly, while the RTS is a retractable telescopic system with a self-storing mechanism.
