### Chili, NY Department of Public Works

#### Application Spotlight Location:

Department of Public Works  
Chili, NY

#### Monoxivent Sales Rep:

Slater Equipment Co. Inc.  
Dave A Principe  
Rochester, NY

#### Details:

(3) Model 9000 Spring Hose Reels with 6" 24' Feet Series 4000 Hose and Fume Hood Model SFH-58" wide used for source capture at Department of Public Works

Slater Equipment was awarded the job with Chili, NY Department of Public Works based on construction documents. After review/ coordination the design was changed from non-hose reel vehicle exhaust to (3) Model 9000 Spring Hose Reels with 6" 24' Feet Series 4000 Hose. Also included was an upgrade to provide a slotted Fume Hood Model SFH-58" wide.

A combination of spring hose and slotted fume hoods is common in public works facilities, as the shops have a variety of vehicles that require maintenance and welding. Per the Town of Chili, they have since eliminated the need to sub out their welding to an outside source, due to not having enough exhaust and filling up the building with smoke.
